

Amcot Cooling Tower, Model ST150, S/N 958881, 33,260 cfm, 318 gpm, with temperature gauge on side. Tatung Co., 3 phase induction motor, Model TB1Y58N6A, S/N U380228326, 208-230/460 volt, 5.9-5.7/2.9 amp, TENV enclosure, Frame 184TC, Max amb. 40 °C, Service factor 1.0, continuous duty, 1.5 hp, 865 rpm.

The amcot Silver Series Cooling Tower

Design Features:

Lightweight and compact, the AMCOT cooling tower provides quick and easy installation. Job site assembly is simplified by the modular design of all components.

Prevailing wind directions will not affect cooling tower performance due to the unique circular design of the basin and casing.

Casing:

Easy access through casing simplifies cleaning. Individual fiberglass panels are stainless steel bolted together for periodic wash down and general clean up.

The AMCOT FRP cooling tower is designed for durability and long life even under the most severe environmental weather conditions.

Fan Blades:

Aerodynamically designed propeller type fan blades are used to conserve power and assure quiet operation. AMCOT model ST-3 through ST-50 feature a factory balanced ABS plastic blade. AMCOT model ST-60 and above feature an all aluminum alloy adjustable fan.

Fan Motor:

AMCOT ST-3 through ST-200 have a direct drive motor. AMCOT ST-225 and larger feature a unique belt drive design to reduce noise levels to a minimum.

Water Distribution System:

AMCOT ST-3 through ST-60 use an ABS plastic sprinkler with stainless steel shaft. AMCOT ST-70 and above use an aluminum alloy sprinkler head. Both types of sprinkler heads require little or no head pressure loss and minimum maintenance.

Inlet Louvers:

Non rusting PVC plastic mesh provides easy access to sump while preventing foreign objects from entering water basin.

Ladder:

Provided for maintenance and inspection accessibility to fan and sprinkler systems. (Models ST-40 and above)

Fill Material:

Honeycomb heat embossed PVC is formed to permit high heat transfer efficiency. The AMCOT fill is suitable for operation with inlet water temperature up to 115°F. For temperature above this please select ST-P(polypropylene) or ST-W(wood) models.

Engineered for Cost Efficiency & High Performance

The fan motor is weather-proofed and totally enclosed allowing for less noise and more efficient long-term performance.

The sprinkler pipes are sturdy PVC material pierced with closely-spaced holes allowing thorough distribution of water in a rotating spray covering the entire surface of the filler.

The round design permits maximum air intake regardless of wind direction.

Efficient operation results from the smooth pumping of recirculated water through the stand pipe and up into the sprinkler pipes.

Housing panels and water basin are built of fiberglass reinforced plastic ensuring rust-free long term performance even under the most severe environmental conditions.

The efficiently designed PVC filler creates a surface area that allows for maximum dispersion of water which creates a superior cooling effect.

A large-capacity, durable water basin constructed from rust-proof fiberglass reinforced plastic guarantees low maintenance and long-term operation.

A large diameter outlet pipe draws a constant supply of cooled water from the basin to serve the facility.
