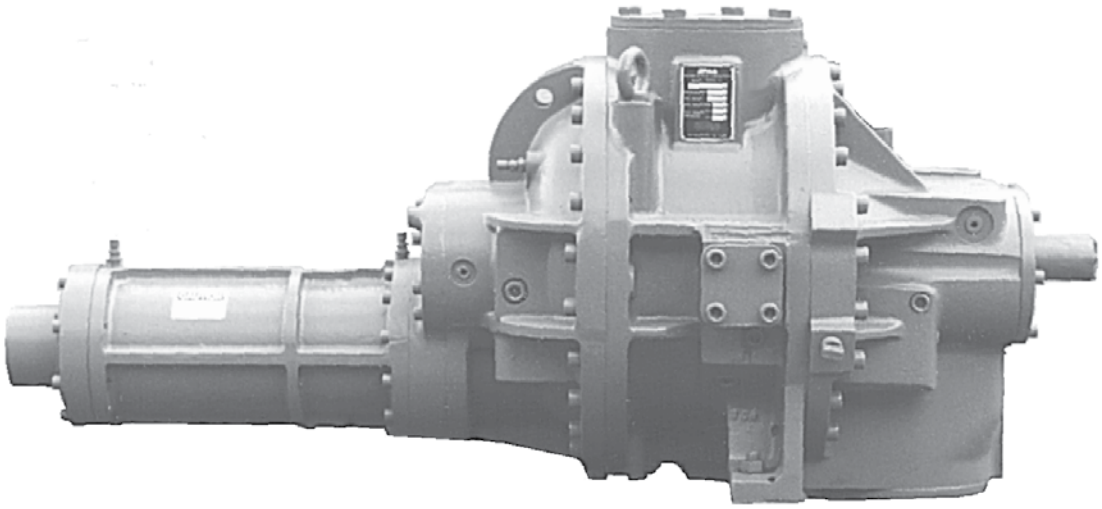
ROTARY SCREW COMPRESSORS
Models TDSH / PDSH 163 through 408



SPECIFICATIONS

The Frick® TDSH / PDSH screw compressors are designed to compress a variety of gases in many different applications including refrigeration, air conditioning, water chilling, wellhead compression, gas gathering, and vapor recovery. Applications include booster duty (low temperature/pressure), high (single) stage, or swing duty compression.

The TDSH compressor is used in typical refrigeration and natural gas applications where pressure retaining housings of cast iron are allowed. The PDSH compressor is used in applications requiring pressure retaining housings such as gas processing or refrigeration in chemical or petrochemical applications. Specifics of the housing materials are discussed under Materials of Construction on page 2.

Stepless Capacity Control - A hydraulically or manually actuated slide valve moves axially along the rotor mesh line to provide unloading. See charts on following pages for percentages. Unloaded gas is bypassed back to suction before compression has begun, allowing the compressor to efficiently accommodate system requirements.

Variable Volume Ratio - A hydraulically actuated slide stop adjusts slide valve length to optimize internal discharge pressure. This matches compressor volume ratio to system pressure ratio and eliminates the power penalties associated with under- or overcompression.

Antifriction Bearings - Cylindrical roller bearings handle radial loads, and angular contact ball bearings, aided by balance pistons, absorb thrust loads. No preloading is required. At design conditions, with proper lubrication and maintenance, bearing life is in excess of 100,000 hours. Roller bearings also maintain superior rotor positioning to minimize internal leakage and provide excellent performance. System differential pressure is normally sufficient as the driving force to supply oil to the bearings, thereby eliminating the need for an oil pump. Antifriction bearings have lower frictional horsepower requirements for lower power consumption. Compressor housings are machined to provide static oil reservoirs for the bearings.

Oil Injection - Injected oil serves to lubricate the bearings, balance piston, and seal, fill any leakage paths between and around the rotors to prevent gas bypassing, and maintain superior efficiencies. Oil injection minimizes noise and vibration. It keeps the compressor cool to prevent overheating by absorbing much of the heat from compression.

Made in the USA - The entire compressor is designed and built by Johnson Controls in Waynesboro, PA. Expert engineering, automated machining centers, clean temperature controlled assembly, and stringent quality control requirements, all contribute to ensuring easy installation, reliable operation, and convenient servicing.

MATERIALS OF CONSTRUCTION

Castings - ASTM A48 class 40 gray cast iron or equivalent is standard for pressure-retaining parts. Suction and discharge flanges comply with ANSI B16.1. A 150 class suction is standard on 163–283 sizes. A 300 class suction flange is standard on the 355 and 408. It is optional on all other models. A 300 class discharge flange is standard on all models.

Alternate casing material is ductile iron grade 60-40-18 per ASTM A395 and ASME SA 395 including a Charpy V-notch test at -4°F(-20°C) and a material certificate type 3.1 per EN 10204. Material is similar to European standard EN 1563, material designation EN-GJS-400-18.

ASTM A395 grade 60-40-18 is, however, standard on the 408.

ASTM A352 grade LCB, LC2, LC3 cast steel is available for all models in this publication.

Rotors - AISI 1141 low carbon steel. The 163 through 233 rotors are machined from hot-rolled bar stock. The 283, 355, and 408 rotors are forgings.

Bearings - Rolling elements and rings are AISI 52100 medium carbon alloy steel. Cages are brass, polyamide, or steel. Tolerance quality complies with ABEC 1 through 3.

Slide Valve Spindle - AISI 1141 or 1144 low carbon steel.
Slide Valve Indicator Rod - Type 416 stainless steel.
Slide Stop Indicator Rod - Type 304 stainless steel.

Pistons, Spacers, Etc. - Gray cast iron, A516 steel plate, regular carbon steel plate, or various types of hot rolled, cold rolled or cold drawn steel bar.

Retaining (Snap) Rings & Spring Washers - High carbon spring steel.

Bolts - Grade 8.8, heat treated, medium carbon steel, socket head cap screws.

Static Seals - HNBR O-rings. Viton also available.

Dynamic Seals - Carbon filled teflon.

Shaft Seal - Spring-loaded stationary carbon end face rides in a stainless steel carrier against a rotating nonmagnetic cast iron alloy (Ni-resist) floating seat. The assembly is fully balanced and capable of sealing up to 350 PSIG but is vented to low pressure to extend seal life. Secondary seals are HNBR or viton O-rings. Alternate seal designs and materials are available for some applications.

Capacity Control	Infinitely adjustable from 100% to aprox. 10% (23% - 233XL, 15% - 283S/L, 26% - 283SX) by piston- or handwheel-actuated slide valve									
Volume Ratio	Infinitely adjustable from 5.0 to 2.2 (283SX - 4.15 to 2.2)									
Max. Inlet Press. psia (bara)[1]	150.0 (10.3)[1]									
Max. Outlet Press. psia (bara)[1][5]	400.0 (27.6)[1][5]									
Max. Outlet Press. psia (bara)[1][6]	600.0 (41.4)[1][6]									
Minimum Inlet Temp.[4] °F (°C)[1]	-76.0 (-60.0)[1]									
Maximum Inlet Temp. °F (°C)[1]	200.0 (93.3)[1]									
Maximum Outlet Temp. °F (°C)[1]	250.0 (121.1)[1]									
Maximum Temp. Dif. (Suct. to Disch.) °F (°C)[1]	250.0 (138.9)[1]									
Max. Bearing Oil Supply Temp. °F (°C)[1]	230.0 (110.0)[1]									

1. Contingent upon compression ratio, bearing L10 limitations, oil viscosity, and other operating conditions.
2. Compressor suction flow may be zero at full unload slide valve position below 1800 RPM (1200 for 355).
3. Does not include coupling. Resolved to drive shaft.
4. At compressor suction flange. Minimum evaporator temperature can be lower.
5. Standard ASTM A48 class 40 gray cast iron. Some compressors capable of higher pressures in cast iron. Consult Factory.
6. Ductile iron ASTM A395 grade 60-40-18, or cast steel A352 grade LCB, LC2, LC3.
